

WORLDWIDE SCIENCE Alliance

The Global Science Gateway

Why Join the WorldWideScience Alliance?

Offering groundbreaking multilingual search of 500 million pages of scientific information from over 70 countries, WorldWideScience.org is an international model for accelerating science. As a global science gateway providing one-stop, simultaneous searching of databases from around the world, WorldWideScience.org employs complex federated search and translations technologies. This international collaboration speeds access to scientific knowledge and revolutionary advances in science. Membership in the [WorldWideScience Alliance](http://WorldWideScience.org) offers national libraries and information centers the opportunity to participate in this international collaborative partnership.

[WorldWideScience Alliance](http://WorldWideScience.org) members benefit from increased usage and dissemination, via WorldWideScience.org searches, of their own scientific and technical information and data. In addition, [WorldWideScience](http://WorldWideScience.org) offers easy access to information from other international partners.

Interaction between Alliance members facilitates the exchange of experience and expertise, and provides networking opportunities with staff from some of the world's leading science libraries and information centers.

The Alliance drives the direction and enhancement of the WorldWideScience.org site, and members benefit from cutting-edge technology development. Past projects have included incorporation of multilingual translations technology and integration of non-textual content (multimedia and data).
